Product Information

Product identifier	**PRCISR™ CRISPR Alexandria fixed-pair mouse genome-wide CRISPRko library**
Product Number	LGW202
Registration number (Reach)	N/A (product is not subject to registration and is not classified as dangerous under REACH)
Description	Lentiviral CRISPRko dual-targeting sgRNA library targeting the mouse genome, 2 sgRNAs per gene per construct, 2 constructs per gene. The two tracrRNAs are found in both orientations on the plasmid (from the hU6 and h7SK promoters). This product is delivered as DNA suspended in 10 mM Tris-Cl, pH 8.5. The CRISPR (Clustered Regularly Interspaced Short Palindromic Repeats) technology has revolutionized biological research. Initially discovered as a bacterial defense system (1), it rapidly became adapted to function in mammalian cells to cut almost any region in a genome (2,3). The functional riboprotein complex consists of a Cas nuclease and a single chimeric RNA molecule (sgRNA) that provides target-sequence specificity. Both components can be packed into lentiviral transfer vehicles to transduce almost any cell type and facilitate targeted genome editing. 3Cs sgRNA reagents and libraries are made based on publicly available protocols (4,5)
Amount	120 µg
Species	Mouse
Target genes	22,314 genes 4 unique sgRNAs per gene, assembled into 2 unique pairs
Size	44,756 sgRNA combinations
Control combinations	Non-targeting (50) LacZ (10) Luciferase (10) eGFP (10) Safe harbor: AAVS1 (25) and Rosa26 (18) DNA-damaged induced apoptosis: SuperCutter (2)
Vector	Backbone: pViv051 tracrRNA vector : pViv049 sgRNA promoter(s): hU6 and h7SK Cas Protein: none Fluorescence: none Selection antibiotics: puromycin

Product Information

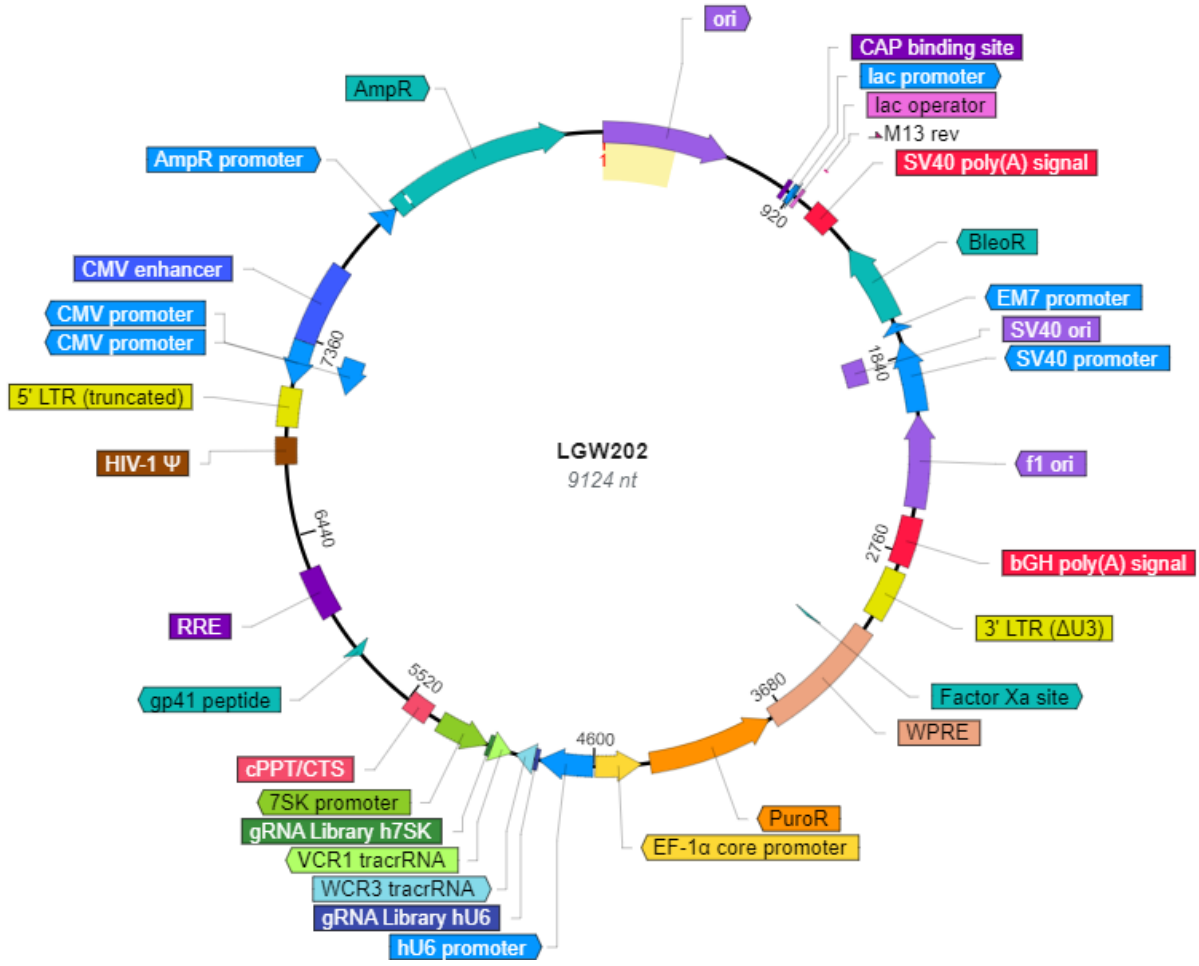
Virus production

Before starting any lentiviral work, please ensure compliance with your Environmental Health and Safety office and government/organization. Vivlion libraries are compatible with 2nd or 3rd generation lentiviral packaging plasmids.

Storage

After receiving PRCISR™ CRISPR reagents, immediately store at -20°C. Avoid freeze/thaw cycles.

Plasmid Map



This plasmid map was generated with VectorBee.

Restricted use

PRCISR™ CRISPR sgRNA reagents and libraries are for R&D use only and not intended for human or animal diagnostic or therapeutic use, or other uses. Although the lentiviral transduction particles produced are replication-incompetent, they should still be handled under Biosafety Level 2 (BSL-2) conditions in the laboratory. Follow all published BSL-2 guidelines for laboratory handling and waste decontamination.

It is not permitted to amplify 3Cs-generated libraries.

This product is subject to third-party licenses and is sold under limited license conditions. The client agrees to use the purchased products solely for their own research purposes and shall neither resell them nor otherwise transfer them to any third party. Vivlion grants a non-exclusive, nontransferable, non-sublicensable license to the third-party licenses underlying the product of Broad Institute Inc., 415 Main Street, Cambridge, MA 02142, USA and ERS Genomics Limited, 88 Harcourt Street, Dublin 2, Ireland, but cannot exclude that relevant third-party rights still exist.

Registration number (Reach)

N/A (product is not subject to registration and is not classified as dangerous under REACH)

Recycling

Vivlion offers to take back and recycle any packaging waste from products.
